REACH pre-registration

In order to ensure compliance with the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) regulation which came into force in June 2007, Maher Ltd has pre-registered the chemical substances contained within its products.

In following the guidance given on registration, Maher has taken the position that only its ingot products are preparations under REACH. All other products supplied are classed as articles and therefore outside the scope of the legislation.

For information, the following chemical substances have been pre-registered:

Chromium	Nickel	Copper
Molybdenum	Niobium	Titanium
Vanadium	Aluminium	Cobalt
Iron	Silicon	Manganese

Certain chemical substances fall below the one tonne requirement and will not be pre-registered.

Please be advised, that to the best of our knowledge, the products supplied by Maher do not contain any of the chemical substances of very high concern defined in Article 57 of the REACH regulation.
